

Sebastian Luna Rodríguez

Senior Frontend Developer

Location: Veracruz, Mexico · Phone number: +52 229 552 5868 · Email: contact@sebastianluna.dev

Portfolio: sebastianluna.dev · LinkedIn: linkedin.com/in/sebastianlunarodriguez

PROFESSIONAL SUMMARY

Frontend developer with six years of professional experience specializing in frontend development with React, Next.js, and TypeScript. Combine frontend architecture, interface design, and backend knowledge to turn business needs into functional products. Took technical ownership of the frontend in small teams and collaborated daily in English with international teams. I am currently developing 365 Días de Ajedrez, my own learning platform, and have specialized in AI-assisted development using tools such as Claude Code under my own technical direction.

PROFESSIONAL EXPERIENCE

Page Consulting (consultant assigned to AstraZeneca)

Frontend Developer | Jun 2023 – Jan 2026

Collaborated within an international team of more than 30 professionals from India, Japan, the United States, and the United Kingdom using Scrum.

- Contributed to defining, designing and developing the frontend for “Comms App”, an application that standardized email incident communications and tracking through resolution.
- Implemented the Tealium tag across multiple websites to collect user behavior data and configured the audiences that fed advertising campaigns.
- Was part of the support team responsible for approximately 500 international corporate websites, handling site releases and decommissioning, SSH configuration, and redirects in Apache configuration files versioned in Bitbucket. Monitored their operation with Catchpoint, configuring failure notifications and performing vulnerability testing.

Mellow

Frontend Developer | Aug 2021 – Jun 2023

Was the frontend developer at Mellow, the company behind “Reto MD”, an application that helps medical students prepare for ENARM (Mexico's national medical residency exam). Made frontend decisions for its products, collaborating closely with backend, design, and product teams.

- Developed the new [Reto MD](#) corporate website with Next.js, TypeScript, and Tailwind CSS. Integrated the blog, job board, events, webinars, podcasts, information about the app and ENARM, and the “About Us” section, and implemented a hybrid authentication system using Firebase and the platform's API.
- Developed the [Reto Dermatología](#), [Reto Cardiología](#), and [Reto Oftalmología](#) websites and then unified the repositories for all specialties into a multi-tenant architecture: defined a configuration interface in TypeScript where each brand declared its colors, visible pages and sections, and vocabulary, and implemented internationalization with next-intl. A single repository generated six independent Vercel deployments ([Cardiología](#), [Dermatología](#), [Oftalmología](#), [Pediatria](#), [Psiquiatria](#), and [Nefrología](#)); with the content ready, a new brand could launch in approximately one hour.
- Replaced blog queries on every visit with Next.js static site generation, reducing the load on the API and speeding up initial loading; incorporated TanStack Query to cache category listings with search and filters, speeding up navigation; and optimized performance, accessibility, best practices, and SEO using Lighthouse reports as the benchmark.
- Carried out the migration from Pages Router to App Router with the upgrade to Next.js 14.
- Standardized form validation with the Zod library and implemented validation with clear error messages in the websites' forms.
- Designed the interface and developed the frontend for the Sociedad Mexicana de Oftalmología (Mexican Society of Ophthalmology) backoffice: management of applicants, specialists, documentation, payments, institutional content, and event access. Built the six-step member registration flow, with navigation to correct previous steps and progress recovery from localStorage, prioritizing readability, contrast, and clear instructions because many users were older adults.

- Developed landing pages for pharmaceutical companies and other Mellow partners, most recently the [Neo-Melubrina®](#) website, which includes a medical calculator.

Proficient

Frontend Developer | Jan 2020 – Aug 2021

Was part of a team of five developers at a software consulting company, building projects for clients across different industries. Joined as a junior intern and gained experience by making adjustments to Shopify stores, developing interfaces with React and Next.js, and creating responsive UI designs in Figma.

- Developed custom Shopify stores using Liquid, HTML, CSS, JavaScript, and Sass. Built Node.js and Express applications that integrated with Shopify's GraphQL and REST APIs. Automated invoicing for a Uruguayan client, generating an invoice for each purchase through a local invoicing provider's API.
- Designed and developed the "Ocho Seis Uno Real" real estate platform from start to finish: gathered requirements through client interviews, defined the project scope, designed the interface in Figma, built the database layer with Prisma and PostgreSQL, and developed the application using Next.js and Docker. Features included property and rental management, payment tracking, income and expense tracking, automated invoicing through the Facturama API, an analytics dashboard built with Chart.js, and a public website configurable through the admin dashboard.
- Designed and developed the website for Vallarta WKND, a tourism services business in Puerto Vallarta. Gathered requirements through client research, created wireframes and high-fidelity designs in Figma, contributed to copywriting and user experience design, and built the frontend with Shopify integration for bookings, payments, and availability.

PERSONAL PROJECT

365 Días de Ajedrez

Founder & Developer | Jan 2026 – Present

Created the [365 Días de Ajedrez](#) academy and developed a platform to centralize classes, courses, games, and study materials. Defined the product based on my experience as a chess coach and took responsibility for user experience design, frontend development, and data and service integration.

- Developed the public site with Next.js, which scores 99 in performance and 100 in accessibility, 100 in best practices, and 100 in SEO on Lighthouse. Designed and developed the learning platform with Next.js, React, and TypeScript, organized into modules for classes, courses with chapters, lessons, and progress tracking, and studies, translating chess teaching needs into interfaces for accessing content, navigating games, and tracking each student's learning.
- Organized the content and data architecture using Payload CMS to manage the public site and Prisma with PostgreSQL for the platform's custom flows.
- Maintain 338 unit tests with Vitest that run in under one second and cover business rules (spaced repetition, streaks, permissions, reordering, and progress).
- Use Claude Code to support development while retaining responsibility for the project's functional definition and architecture decisions.

TECHNICAL SKILLS

- **Core:** React, Next.js, TypeScript, JavaScript, HTML, CSS, Tailwind CSS, Sass, CSS Modules, shadcn/ui, Radix UI, Material UI (MUI), Bootstrap, Framer Motion, React Router, Chart.js · TanStack Query, Zustand, Formik, Zod, Axios, REST, GraphQL · Node.js, Express, Prisma, PostgreSQL, SQL, Firebase, Payload CMS, Shopify and Liquid, Tealium, SnapLogic · Vitest, Jest, Storybook, Lighthouse, Figma · Git, GitHub, Bitbucket, Vite, Vercel, Jenkins, Apache, ESLint, Prettier.
- **Additional (personal projects and coursework):** MongoDB, WebSockets (Socket.IO), Strapi, GitLab, Less, Redux, React Hook Form.

EDUCATION & LANGUAGES

B.Eng. in Business Management and Finance · Universidad de Oriente · 2020–2024

Web Development Bootcamp · Coderhouse · 2022–2023

Spanish: Native. **English:** C1 Advanced, EF SET certificate, Feb 2023.
